Tool Category no. 3.2 Project Design

Overview	
ID-number	3.2.1
Name	Ariane
Date	N/A
Type	Model
Language	English French
Developer	PROSIM (France)
Contact Data	www.prosim.net

Description

Ariane is a decision support tool dedicated to the management of plants that produce energy under the form of utilities (steam, electricity, hot water...). Maximizing assets value, minimizing investment risk, reducing operating costs, controlling plant emissions, Ariane provides the support needed to respond efficiently to these challenges, with accurate representation of production processes and of associated technical and financial constraints.
